Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: Resonator for Use in Electronic Article Surveillance Systems.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this

Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Watanabe (U.S. 5,804,282).

For claim 1, Watanabe discloses a resonator (col 1, Ins 11-18 and 30-33) constituted by an amorphous alloy ribbon having a width of 7mm or less (col 6, Ins 43 and 44; col 11, Ins 43 and 44) and a thickness of 18-23 micrometers (col 6, Ins 46-48). A resonator is defined as a system that resonates, such as a circuit that combines capacitance and inductance in such a way that a periodic electric oscillation or frequency will reach maximum amplitude; therefore, Watanabe discloses a resonator as the amorphous alloy disclosed inherently resonates.

Art Unit: 2636

For claim 2, Watanabe discloses a resonator wherein said amorphous alloy ribbon has an average surface roughness Ra of 0.45 micrometers or less (col 4, Ins 18-25, 28, 29, and 41-46).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Sawa et al. (US 4,958,134) discloses a resonator for an amorphous alloy ribbon having a roughness between .2 and .8 micrometers.

Sunakawa et al. (US 6,749,700) discloses a resonator for an amorphous alloy ribbon having a thickness between 8-19 micrometers and a surface roughness of .5 micrometers or less.

Sato et al. (US 4,865,664) discloses an amorphous alloy ribbon with a surface roughness below .5 micrometers.

Herzer et al. (US 6,137,412) discloses an EAS amorphous alloy ribbon with a width of 2 mm and a thickness of 25 micrometers.
